IEE Proceedings

Generation, Transmission and Distribution

The Institution of Electrical Engineers, Savoy Place, London WC2R 0BL, United Kingdom
Publishing Department: Michael Faraday House, Six Hills Way, Stevenage, Herts. SG1 2AY, United Kingdom

Volume 144 1997 UK ISSN 1350–2360

HONORARY EDITORS

Prof. E.J. Handschin (*University of Dortmund*) Prof. J.R. McDonald (*University of Strathclyde*)
Prof. J.R. Smith (*University of Strathclyde*) Dr. B. Fox (*The Queen's University of Belfast*)

Pages in issues of *IEE Proc., Gener. Transm. Distrib.* 1997

Pages	Issue No.	Date
1–80	1	January
81–224	2	March
225–344	3	May
345–388	4	July
389–516	5	September
517–568	6	November

Zhang, B.H. p351
Zhu, T.X. p81

AUTOMATIC TEST SYSTEMS

Application of Kalman filtering for continuous real-time tracking of power system harmonics p13
Digital algorithms for measurement of voltage flicker p175

CABLES AND OVERHEAD LINES

AC circuit breakers: pollution flashover performance of various types of interrupter head p50
Alternative to Monte Carlo method for the estimation of lightning incidence to overhead lines p129
Calculation of thermal fields of underground cable systems with consideration of structural steels constructed in a duct bank p541
Development of an energy function reflecting the transfer conductances for direct stability analysis in power systems p503
Earthing effects of coated underground cables with metallic shields bonded to earth electrodes p26
Methodology and computer package for generation rescheduling p301
New concept in fault location for overhead distribution systems using superimposed components p309
New concept in transmission line reclosure using high-frequency fault transients p351
Online leakage current monitoring of 400 kV insulator strings in polluted areas p515
Statistical study for switching processes in compensated UHV transmission systems p237

CAPACITORS

Exact analysis of a multipulse shunt converter compensator or Statcon. I. Performance p213
PWM-controlled series compensation with low harmonic distortion p555

CIRCUIT BREAKERS

AC circuit breakers: pollution flashover performance of various types of interrupter head p50
Probabilistic approach for fault-section estimation in power systems based on a refined genetic algorithm p160
Role of cooling fins in circuit breakers p57

COMPUTER APPLICATIONS

Computer-based strategy for the restoration problem in electric power distribution systems p389
Digital algorithms for measurement of voltage flicker p175
Quadratic sensitivities for power system steady-state control p317

CONTROL SYSTEM ANALYSIS

Damping of multimodal oscillations in power systems using variable structure control techniques p323
Dynamic modelling of a unified power flow controller p7
Environmental/economic dispatch using fuzzy logic controlled genetic algorithms p377
Evaluation of load shedding to prevent dynamic voltage instability based on extended fuzzy reasoning p81
Improvement of network damping and transient stability by active and reactive power control p125
Indices for selecting the best location of PSSs or FACTS-based stabilisers in multimachine power systems: a comparative study p155
Output feedback TCSC controllers to improve damping of meshed multi-machine power systems p243
Predictive analogue generator excitation controller p271
Quadratic sensitivities for power system steady-state control p317
Robust decentralised design for multiple FACTS damping controllers p61
Selection of installing locations and feedback signals of FACTS-based stabilisers in multimachine power systems by reduced-order modal analysis p263
Simultaneous stabilisation of power systems using genetic algorithms p39

CONTROL SYSTEM SYNTHESIS

Damping of multimodal oscillations in power systems using variable structure control techniques p323
Environmental/economic dispatch using fuzzy logic controlled genetic algorithms p377
Improvement of network damping and transient stability by active and reactive power control p125
Indices for selecting the best location of PSSs or FACTS-based stabilisers in multimachine power systems: a comparative study p155
Output feedback TCSC controllers to improve damping of meshed multi-machine power systems p243
Predictive analogue generator excitation controller p271
Robust decentralised design for multiple FACTS damping controllers p61
Simultaneous stabilisation of power systems using genetic algorithms p39

CONVERTORS

Active power filter with sliding mode control p564
Exact analysis of a multipulse shunt converter compensator or Statcon. I. Performance p213
Exact analysis of a multipulse shunt convertor compensator or Statcon. II. Analysis p219
Improved simulation of HVDC converter transformers in electromagnetic transient programs p100
Mathematical models of a three-level advanced static VAr compensator p201
Robust decentralised design for multiple FACTS damping controllers p61

DATA HANDLING

Data visualisation and identification of anomalies in power system state estimation using artificial neural networks p445
Fuzzy rule-based expert system for power system fault diagnosis p186

EDUCATION AND TRAINING

Feasibility study of transient stability analysis for operator training simulators p510

ELECTRIC DISCHARGES

AC circuit breakers: pollution flashover performance of various types of interrupter head p50

ELECTROMAGNETISM

Calculation of thermal fields of underground cable systems with consideration of structural steels constructed in a duct bank p541
Newton-Raphson approach for the analysis of ferroresonant circuits p489

ELECTRIC VARIABLES CONTROL

Active power filter with sliding mode control p564
Co-ordination of emergency secondary-voltage control and load shedding to prevent voltage instability p293
Distribution system voltage and reactive power control based on probabilistic load flow analysis p363
Dynamic modelling of a unified power flow controller p7
Exact analysis of a multipulse shunt converter compensator or Statcon. I. Performance p213
Improvement of network damping and transient stability by active and reactive power control p125
Output feedback TCSC controllers to improve damping of meshed multi-machine power systems p243
Predictive analogue generator excitation controller p271
Quadratic sensitivities for power system steady-state control p317
Selection of installing locations and feedback signals of FACTS-based stabilisers in multimachine power systems by reduced-order modal analysis p263
Unified power flow controller: a critical comparison of Newton-Raphson UPFC algorithms in power flow studies p437
Voltage control by tap-changing transformers for a radial distribution network p517

ENERGY CONVERSION

Damping torsional oscillations due to network faults using the dynamic flywheel damper p495

EXPERT SYSTEMS

Application of artificial neural networks to the dynamic analysis of the voltage stability problem p371
Artificial intelligence algorithms for short term scheduling of thermal generators and pumped-storage p193
Comprehensive algorithm for hydrothermal coordination p482
Computer-based strategy for the restoration problem in electric power distribution systems p389
Fuzzy assessment of power system transient stability level based on steady-state data p525
Fuzzy logic approach in power system fault section identification p406
Fuzzy rule-based expert system for power system fault diagnosis p186
Large-scale economic dispatch using an improved Hopfield neural network p181

FEEDBACK

Output feedback TCSC controllers to improve damping of meshed multi-machine power systems p243
Robust decentralised design for multiple FACTS damping controllers p61
Selection of installing locations and feedback signals of FACTS-based stabilisers in multimachine power systems by reduced-order modal analysis p263
Short-term load forecasting for demand side management p68

FILTERS AND FILTERING

Active power filter with sliding mode control p564
Digital algorithms for measurement of voltage flicker p175

FUZZY CONTROL

Environmental/economic dispatch using fuzzy logic controlled genetic algorithms p377
Evaluation of load shedding to prevent dynamic voltage instability based on extended fuzzy reasoning p81

GENERATORS

Damping torsional oscillations due to network faults using the dynamic flywheel damper p495
Predictive analogue generator excitation controller p271

INSULATED GATE FIELD EFFECT TRANSISTORS

Active power filter with sliding mode control p564

INSULATORS AND INSULATION

AC circuit breakers: pollution flashover performance of various types of interrupter head p50

Earthing effects of coated underground cables with metallic shields bonded to earth electrodes p26
Online leakage current monitoring of 400 kV insulator strings in polluted areas p515
Role of cooling fins in circuit breakers p57

LINEAR NETWORK ANALYSIS

Exact analysis of a multipulse shunt convertor compensator or Statcon. II. Analysis p219

MATHEMATICAL TECHNIQUES

Advanced engineered-conditioning genetic approach to power economic dispatch p285
Analysis of very fast transient overvoltage in transformer winding p461
Capacitor placement in distribution systems using heuristic search strategies p225
Comprehensive algorithm for hydrothermal coordination p482
Decomposition approach to unit commitment with reactive constraints p113
Development of constrained-genetic-algorithm load-flow method p91
Distribution network reconfiguration for loss reduction using fuzzy controlled evolutionary programming p345
Distribution system voltage and reactive power control based on probabilistic load flow analysis p363
Effect of initial conditions on chaotic ferroresonance in power transformers p456
Environmental/economic dispatch using fuzzy logic controlled genetic algorithms p377
Exact analysis of a multipulse shunt convertor compensator or Statcon. II. Analysis p219
Ferroresonance in electromagnetic voltage transformers: a study based on nonlinear dynamics p383
Fuzzy assessment of power system transient stability level based on steady-state data p525
Fuzzy optimisation of capacitors in distribution systems p415
Fuzzy rule-based expert system for power system fault diagnosis p186
Large-scale economic dispatch using an improved Hopfield neural network p181
Linear indicator for voltage collapse in power systems p139
Mathematical models of a three-level advanced static VAr compensator p201
New dynamic, branch exchange method for optimal distribution system planning p333
Newton-Raphson approach for the analysis of ferroresonant circuits p489
Output feedback TCSC controllers to improve damping of meshed multi-machine power systems p243
Parametric harmonic analysis [of power systems] p21
Power systems fault diagnosis using Petri nets p231
Probabilistic approach for fault-section estimation in power systems based on a refined genetic algorithm p160
Selection of installing locations and feedback signals of FACTS-based stabilisers in multimachine power systems by reduced-order modal analysis p263
Short-term generation scheduling of thermal units with voltage security and environmental constraints p469
Short-term load forecasting using threshold autoregressive models p477
Short-term power purchases considering uncertain prices p423
Simultaneous stabilisation of power systems using genetic algorithms p39
Surrogate worth trade-off technique for multi-objective optimal power flows p547
Tabu search approach to alarm processing in power systems p31

MEASUREMENT OF SPECIFIC VARIABLES

Digital algorithms for measurement of voltage flicker p175
Online leakage current monitoring of 400 kV insulator strings in polluted areas p515

MULTIVARIABLE CONTROL SYSTEMS

Active power filter with sliding mode control p564
Damping of multimodal oscillations in power systems using variable structure control techniques p323
Robust decentralised design for multiple FACTS damping controllers p61

NEURAL NETS

Application of artificial neural networks to the dynamic analysis of the voltage stability problem p371
Data visualisation and identification of anomalies in power system state estimation using artificial neural networks p445
Field studies using a neural-net-based approach for fault diagnosis in distribution networks p429
Hybrid approach using counterpropagation neural network for power-system network reduction p169
Kohonen neural network based approach to voltage weak buses/areas identification p340
Large-scale economic dispatch using an improved Hopfield neural network p181

NONLINEAR CONTROL SYSTEMS

Damping of multimodal oscillations in power systems using variable structure control techniques p323

NUMERICAL ANALYSIS

Calculation of thermal fields of underground cable systems with consideration of structural steels constructed in a duct bank p541
Data visualisation and identification of anomalies in power system state estimation using artificial neural networks p445
Decomposition approach to unit commitment with reactive constraints p113
Digital algorithms for measurement of voltage flicker p175
Effect of initial conditions on chaotic ferroresonance in power transformers p456
Ferroresonance in electromagnetic voltage transformers: a study based on nonlinear dynamics p383
Linear indicator for voltage collapse in power systems p139
Methodology and computer package for generation rescheduling p301
Newton-Raphson approach for the analysis of ferroresonant circuits p489
Short-term power purchases considering uncertain prices p423
Simultaneous stabilisation of power systems using genetic algorithms p39
Unified power flow controller: a critical comparison of Newton-Raphson UPFC algorithms in power flow studies p437

OPTIMAL CONTROL

Environmental/economic dispatch using fuzzy logic controlled genetic algorithms p377
Improvement of network damping and transient stability by active and reactive power control p125
Output feedback TCSC controllers to improve damping of meshed multi-machine power systems p243
Predictive analogue generator excitation controller p271
Simultaneous stabilisation of power systems using genetic algorithms p39

OPTIMISATION

Capacitor placement in distribution systems using heuristic search strategies p225
Fuzzy optimisation of capacitors in distribution systems p415
Large-scale economic dispatch using an improved Hopfield neural network p181
New dynamic, branch exchange method for optimal distribution system planning p333
Short-term load forecasting using threshold autoregressive models p477
Short-term power purchases considering uncertain prices p423
Tabu search approach to alarm processing in power systems p31

PARAMETER ESTIMATION

Kohonen neural network based approach to voltage weak buses/areas identification p340

POWER ENGINEERING COMPUTING

Application of artificial neural networks to the dynamic analysis of the voltage stability problem p371
Artificial intelligence algorithms for short term scheduling of thermal generators and pumped-storage p193
Comprehensive algorithm for hydrothermal coordination p482
Computer-based strategy for the restoration problem in electric power distribution systems p389
Data visualisation and identification of anomalies in power system state estimation using artificial neural networks p445
Digital algorithms for measurement of voltage flicker p175
Feasibility study of transient stability analysis for operator training simulators p510
Field studies using a neural-net-based approach for fault diagnosis in distribution networks p429
Fuzzy assessment of power system transient stability level based on steady-state data p525
Fuzzy logic approach in power system fault section identification p406
Fuzzy rule-based expert system for power system fault diagnosis p186
Hybrid approach using counterpropagation neural network for power-system network reduction p169
Improved simulation of HVDC converter transformers in electromagnetic transient programs p100
Kohonen neural network based approach to voltage weak buses/areas identification p340
Large-scale economic dispatch using an improved Hopfield neural network p181
Mathematical models of a three-level advanced static VAr compensator p201
Methodology and computer package for generation rescheduling p301
Quadratic sensitivities for power system steady-state control p317

POWER SYSTEM CONTROL

Active power filter with sliding mode control p564
Co-ordination of emergency secondary-voltage control and load shedding to prevent voltage instability p293
Computer-based strategy for the restoration problem in electric power distribution systems p389
Damping of multimodal oscillations in power systems using variable structure control techniques p323
Distribution system voltage and reactive power control based on probabilistic load flow analysis p363
Dynamic modelling of a unified power flow controller p7
Environmental/economic dispatch using fuzzy logic controlled genetic algorithms p377
Evaluation of load shedding to prevent dynamic voltage instability based on extended fuzzy reasoning p81
Exact analysis of a multipulse shunt converter compensator or Statcon. I. Performance p213
Improvement of network damping and transient stability by active and reactive power control p125
Indices for selecting the best location of PSSs or FACTS-based stabilisers in multimachine power systems: a comparative study p155
Mathematical models of a three-level advanced static VAr compensator p201
Output feedback TCSC controllers to improve damping of meshed multi-machine power systems p243
Predictive analogue generator excitation controller p271
PWM-controlled series compensation with low harmonic distortion p555
Quadratic sensitivities for power system steady-state control p317
Robust decentralised design for multiple FACTS damping controllers p61
Selection of installing locations and feedback signals of FACTS-based stabilisers in multimachine power systems by reduced-order modal analysis p263
Simultaneous stabilisation of power systems using genetic algorithms p39
Unified power flow controller: a critical comparison of Newton-Raphson UPFC algorithms in power flow studies p437
Voltage control by tap-changing transformers for a radial distribution network p517

POWER SYSTEM MANAGEMENT

Active power filter with sliding mode control p564
Advanced engineered-conditioning genetic approach to power economic dispatch p285
Co-ordination of emergency secondary-voltage control and load shedding to prevent voltage instability p293
Computer-based strategy for the restoration problem in electric power distribution systems p389

Damping of multimodal oscillations in power systems using variable structure control techniques p323
Distribution system voltage and reactive power control based on probabilistic load flow analysis p363
Dynamic modelling of a unified power flow controller p7
Efficient loss-of-load cost evaluation by combined pseudo-sequential and state transition simulation p147
Elimination of merchandise surplus due to spot pricing of electricity p399
Environmental/economic dispatch using fuzzy logic controlled genetic algorithms p377
Evaluation of load shedding to prevent dynamic voltage instability based on extended fuzzy reasoning p81
Fixed/switched type shunt capacitor planning of distribution systems by considering customer load patterns and simplified feeder model p533
Improvement of network damping and transient stability by active and reactive power control p125
Indices for selecting the best location of PSSs or FACTS-based stabilisers in multimachine power systems: a comparative study p155
Large-scale economic dispatch using an improved Hopfield neural network p181
Mathematical models of a three-level advanced static VAr compensator p201
Methodology and computer package for generation rescheduling p301
Model for security of service costing in electric transmission systems p521
New concept in fault location for overhead distribution systems using superimposed components p309
New dynamic, branch exchange method for optimal distribution system planning p333
On-line dynamic-security contingency screening and ranking p132
Output feedback TCSC controllers to improve damping of meshed multi-machine power systems p243
PWM-controlled series compensation with low harmonic distortion p555
Quadratic sensitivities for power system steady-state control p317
Robust decentralised design for multiple FACTS damping controllers p61
Selection of installing locations and feedback signals of FACTS-based stabilisers in multimachine power systems by reduced-order modal analysis p263
Short-term load forecasting for demand side management p68
Short-term power purchases considering uncertain prices p423
Simultaneous stabilisation of power systems using genetic algorithms p39
Tabu search approach to alarm processing in power systems p31
Unified power flow controller: a critical comparison of Newton-Raphson UPFC algorithms in power flow studies p437
Voltage control by tap-changing transformers for a radial distribution network p517

POWER SYSTEM PROTECTION

Earthing effects of coated underground cables with metallic shields bonded to earth electrodes p26
On-line dynamic-security contingency screening and ranking p132
Probabilistic approach for fault-section estimation in power systems based on a refined genetic algorithm p160
Tabu search approach to alarm processing in power systems p31
Voltage stability: significance of load characteristics and current limiters p257

POWER SYSTEMS AND APPLICATIONS

Digital algorithms for measurement of voltage flicker p175

POWER SYSTEMS AND PLANTS

Active power filter with sliding mode control p564
Application of artificial neural networks to the dynamic analysis of the voltage stability problem p371
Application of Kalman filtering for continuous real-time tracking of power system harmonics p13
Application of sequential Monte Carlo simulation to evaluation of distributions of composite system indices p87
Artificial intelligence algorithms for short term scheduling of thermal generators and pumped-storage p193
Bounding method based on generalised real power distribution factors p249
Capacitor placement in distribution systems using heuristic search strategies p225
Composite system adequacy assessment using sequential Monte Carlo simulation with variance reduction techniques [power networks] p1
Comprehensive algorithm for hydrothermal coordination p482
Data visualisation and identification of anomalies in power system state estimation using artificial neural networks p445
Decomposition approach to unit commitment with reactive constraints p113
Development of an energy function reflecting the transfer conductances for direct stability analysis in power systems p503
Development of constrained-genetic-algorithm load-flow method p91
Digital algorithms for measurement of voltage flicker p175
Earthing effects of coated underground cables with metallic shields bonded to earth electrodes p26
Feasibility study of transient stability analysis for operator training simulators p510
Field studies using a neural-net-based approach for fault diagnosis in distribution networks p429
Fixed/switched type shunt capacitor planning of distribution systems by considering customer load patterns and simplified feeder model p533
Fuzzy assessment of power system transient stability level based on steady-state data p525
Fuzzy logic approach in power system fault section identification p406
Fuzzy optimisation of capacitors in distribution systems p415
Fuzzy rule-based expert system for power system fault diagnosis p186
Hybrid approach using counterpropagation neural network for power-system network reduction p169
Identifiability of load models [power systems] p45
Improved techniques for hybrid method in fast-transient stability assessment p107
Kohonen neural network based approach to voltage weak buses/areas identification p340
Linear indicator for voltage collapse in power systems p139
Look-ahead approach to power system loadability enhancement p357
Mathematical models of a three-level advanced static VAr compensator p201
Methodology and computer package for generation rescheduling p301
New approach for power network clustering using a representative model p279
New concept in fault location for overhead distribution systems using superimposed components p309
New dynamic, branch exchange method for optimal distribution system planning p333
Newton-Raphson approach for the analysis of ferroresonant circuits p489
Parametric harmonic analysis [of power systems] p21
Power systems fault diagnosis using Petri nets p231
PWM-controlled series compensation with low harmonic distortion p555
Robust decentralised design for multiple FACTS damping controllers p61
Selection of installing locations and feedback signals of FACTS-based stabilisers in multimachine power systems by reduced-order modal analysis p263
Short-term generation scheduling of thermal units with voltage security and environmental constraints p469
Short-term load forecasting for demand side management p68
Short-term load forecasting using threshold autoregressive models p477
Short-term power purchases considering uncertain prices p423
Statistical study for switching processes in compensated UHV transmission systems p237
Surrogate worth trade-off technique for multi-objective optimal power flows p547
Urban underground network expansion planning p118
Use of a saturating choke in the series capacitor compensation of distribution lines p75
Voltage stability: significance of load characteristics and current limiters p257

POWER TRANSMISSION AND DISTRIBUTION

Application of optimum stratified sampling and separate ratio estimation in stochastic copper loss of transmission system evaluation p207
Bounding method based on generalised real power distribution factors p249
Capacitor placement in distribution systems using heuristic search strategies p225
Computer-based strategy for the restoration problem in electric power distribution systems p389
Distribution network reconfiguration for loss reduction using fuzzy controlled evolutionary programming p345
Distribution system voltage and reactive power control based on probabilistic load flow analysis p363
Earthing effects of coated underground cables with metallic shields bonded to earth electrodes p26
Field studies using a neural-net-based approach for fault diagnosis in distribution networks p429
Fixed/switched type shunt capacitor planning of distribution systems by considering customer load patterns and simplified feeder model p533
Fuzzy logic approach in power system fault section identification p406
Fuzzy optimisation of capacitors in distribution systems p415
Improved simulation of HVDC converter transformers in electromagnetic transient programs p100
Improvement of network damping and transient stability by active and reactive power control p125
Indices for selecting the best location of PSSs or FACTS-based stabilisers in multimachine power systems: a comparative study p155
Model for security of service costing in electric transmission systems p521
New concept in fault location for overhead distribution systems using superimposed components p309
New dynamic, branch exchange method for optimal distribution system planning p333
Output feedback TCSC controllers to improve damping of meshed multi-machine power systems p243
PWM-controlled series compensation with low harmonic distortion p555
Robust decentralised design for multiple FACTS damping controllers p61
Selection of installing locations and feedback signals of FACTS-based stabilisers in multimachine power systems by reduced-order modal analysis p263
Statistical study for switching processes in compensated UHV transmission systems p237
Surrogate worth trade-off technique for multi-objective optimal power flows p547
Unified power flow controller: a critical comparison of Newton-Raphson UPFC algorithms in power flow studies p437
Urban underground network expansion planning p118
Use of a saturating choke in the series capacitor compensation of distribution lines p75
Voltage control by tap-changing transformers for a radial distribution network p517

PREDICTIVE CONTROL

Predictive analogue generator excitation controller p271

PROBABILITY AND STATISTICS

Application of optimum stratified sampling and separate ratio estimation in stochastic copper loss of transmission system evaluation p207
Application of sequential Monte Carlo simulation to evaluation of distributions of composite system indices p87
Composite system adequacy assessment using sequential Monte Carlo simulation with variance reduction techniques [power networks] p1
Distribution system voltage and reactive power control based on probabilistic load flow analysis p363
Efficient loss-of-load cost evaluation by combined pseudo-sequential and state transition simulation p147
Environmental/economic dispatch using fuzzy logic controlled genetic algorithms p377
Probabilistic approach for fault-section estimation in power systems based on a refined genetic algorithm p160
Short-term load forecasting using threshold autoregressive models p477
Statistical study for switching processes in compensated UHV transmission systems p237

PRODUCTION ENGINEERING

Application of sequential Monte Carlo simulation to evaluation of distributions of composite system indices p87
Efficient loss-of-load cost evaluation by combined pseudo-sequential and state transition simulation p147
Model for security of service costing in electric transmission systems p521

SEMICONDUCTOR DEVICES AND MATERIALS

Active power filter with sliding mode control p564

SIMULATION, MODELLING AND IDENTIFICATION

Data visualisation and identification of anomalies in power system state estimation using artificial neural networks p445

STABILITY

Co-ordination of emergency secondary-voltage control and load shedding to prevent voltage instability p293
Damping of multimodal oscillations in power systems using variable structure control techniques p323
Evaluation of load shedding to prevent dynamic voltage instability based on extended fuzzy reasoning p81
Improvement of network damping and transient stability by active and reactive power control p125
Indices for selecting the best location of PSSs or FACTS-based stabilisers in multimachine power systems: a comparative study p155
Output feedback TCSC controllers to improve damping of meshed multi-machine power systems p243
Robust decentralised design for multiple FACTS damping controllers p61
Selection of installing locations and feedback signals of FACTS-based stabilisers in multimachine power systems by reduced-order modal analysis p263
Simultaneous stabilisation of power systems using genetic algorithms p39

SWITCHGEAR

AC circuit breakers: pollution flashover performance of various types of interrupter head p50
Probabilistic approach for fault-section estimation in power systems based on a refined genetic algorithm p160
Role of cooling fins in circuit breakers p57

TRANSFORMERS

Analysis of very fast transient overvoltage in transformer winding p461
Earthing effects of coated underground cables with metallic shields bonded to earth electrodes p26
Effect of initial conditions on chaotic ferroresonance in power transformers p456
Exact analysis of a multipulse shunt converter compensator or Statcon. I. Performance p213
Ferroresonance in electromagnetic voltage transformers: a study based on nonlinear dynamics p383
Improved simulation of HVDC converter transformers in electromagnetic transient programs p100
PWM-controlled series compensation with low harmonic distortion p555
Use of a saturating choke in the series capacitor compensation of distribution lines p75
